WHY PLAN NOT SOUND	MODIFICATIONS	HEARINGS	HEARING SESSIONS
Putting it simply, STOP BUILDING HOUSES. Loughborough is now merging with Quorn and Shepshed instead of having green land between the towns. [redacted] because it is easy to get out into the countryside and away from the urbanisation, away from the traffic. I am a keen cyclist and I am sick and disgusted by constantly turning the next corner to be met with another building site - new housing, new warehouse units, new roads..... With recent developments, Loughborough is becoming a high-rise town, nothing but student flats everywhere and ugly to go with it. Building more and more houses is not the answer to the issue. The houses are still not affordable, I live on my own and there is no way I can get a deposit together for a new build 2 bedroom house. Not that I'd want one. Develop the properties that are already in existence but have been empty for years. Where it is redevelopment such as the new student flats in Loughborough town centre, stop allowing more student accommodation to be built, but provide accommodation for the residents of Loughborough. I also don't want to see open land disappear under wind and solar projects. Look at the solar field alongside the canal, it's no longer open land, it's a sheet of reflective glass. Instead of allowing land to be buried under these atrocities, provide an incentive and support for residents to install solar panels on their houses. I investigated solar panels for my house a couple of years back, the intention to reduce my electricity bill and footprint. As I live on my own, my current electricity bill is very low. To install solar panels would more than double the cost of my current bill. There's a reason why cities, towns and villages are flooding and that is because of the amount of land that is being concreted over. The land is no longer able to soak up the water, it's runs off the surfaces into gullies and troughs where it accumulates as the drainage system is not able to withstand the increased water volumes due to the excess building and development. The science park between Loughborough University and the M1 is awful. When I came to university here in the early 2000's, it was lovely to see the open green fields when coming off the M1 and driving along the A512 to the university. Now there's just the dismal site of yet more construction and destruction of the environment. Any incentives for housing improvements are aimed at low income families or disabilities or families in general. Anyone who lives on their own and is outside the low income bracket and doesn't have a disability is completely left out. In summary, STOP. NO more new houses. NO more new development between Loughborough University and the M1. NO more wind and solar farms.	STOP.	No
