

Household Battery Recycling

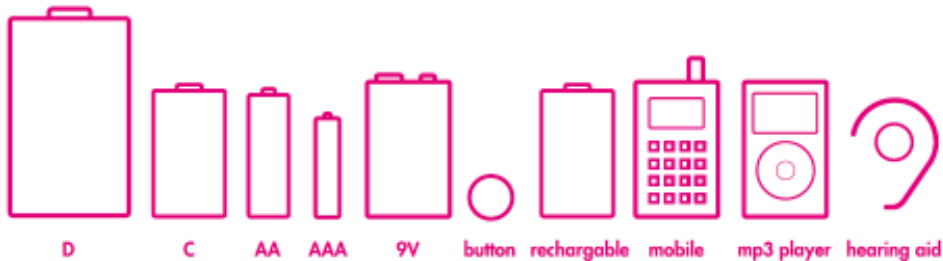

You can now recycle your batteries from the kerbside!

Charnwood Borough Council is trialling a kerbside collection of used batteries in your area. By recycling your batteries, all the hazardous materials included will be diverted from landfill while the useful ones can be reprocessed into new materials.

Enclose your used batteries in the battery bag, seal it up and leave it out for collection next to your green recycling box on your usual collection day. We will leave a replacement bag for your next collection.

Please note that the scheme works most effectively when you put out more than 10 batteries for recycling.

The following batteries can be recycled

We can also accept laptop and power tool batteries, but we cannot accept car or other industrial batteries.

If you would like more information please visit our website or contact us.
