

PERMIT I27

**POLLUTION PREVENTION AND CONTROL ACT 1999
 ENVIRONMENTAL PERMITTING (ENGLAND AND WALES) REGULATIONS
 2007
 PERMIT OF PROCESS**

THIS IS TO CERTIFY THAT the operation of crushing, grinding and other size reduction of bricks, concrete or other mineral products by machinery

at: **N H Skips Ltd, Granite Way Mountsorrel Loughborough
 Leicestershire LE12 7TZ**

(The site location is shown on Appendix I which forms part of this Permit)

has been duly permitted in accordance with Regulation 13(1) of the Environmental Permitting (England and Wales) Regulations 2007 subject to the conditions outlined in this document.

**Name of Operator: N H Skips Ltd
 Registered Office 9a Leicester Road Blaby
 Leicestershire LE8 4GR**

This Permit shall apply only to the mobile plant operated by the applicant, as specified and described in this Permit. This Permit, consisting of ten pages, shall be subject to replacement, variation or amendment, as may be considered appropriate by Charnwood Borough Council at any time, according to provisions of Regulations, 18, 20, and 34 of the Environmental Permitting (England and Wales) Regulations 2007.

The conditions contained herein shall apply from the date of Permit unless otherwise stated.

Signed on behalf of Charnwood Borough Council

.....
 Beverley Green, Specialist Environmental Health Officer
 (the delegated officer for the purpose)

Dated 23 February 2009

Counter-signed

Directorate of Strategic Housing and Health, Environmental Protection Southfields, Southfields Road,
 Loughborough, LE11 3TX

PERMIT 127

Introductory note**This introductory note does not form a part of the permit**

The following Permit is issued under Regulation 13(1) of the Environmental Permitting (England and Wales) Regulations 2007 (S.I 2007/ 3538), as amended, (“the EP Regulations”) to operate an installation carrying out one or more of the activities listed in Part 2 of Schedule I of the EP Regulations, to the extent authorised by the Permit:

Section 3.5, Part B

"Any activity of crushing, grinding and other size reduction of bricks, tiles, concrete or other mineral products by machinery designed for that purpose"

The responsibility you have under legislation for Health, Safety and Welfare in the workplace remains in force. In addition, the Permit does not relieve you of your obligations to obtain planning permission, hazardous substances consent, discharge consent from the Environment Agency, Building Regulations approval, or some Waste Disposal Licences.

Note that the Permit requires the submission of certain information to the Local Authority (LA). In addition, the LA has the power to seek further information at any time under Regulation 60(2) EP Regulations provided that it acts reasonably.

Public Registers

Considerable information relating to Permits including the Application is available on public registers in accordance with Requirement 46(1) EP Regulations. Certain information may be withheld from public registers where it is commercially confidential or contrary to national security.

Variations to the Permit

This Permit may be varied in the future (by the LA serving a Variation Notice on the Operator). If the Operator itself wants any of the Conditions of the Permit to be changed, it must submit a formal Application. The Status Log within the Introductory Note to any such Variation Notice will include summary details of this Permit, variations issued up to that point in time and state whether a consolidated version of the Permit has been issued.

Surrender of the Permit

PERMIT 127

Where the Operator intends to cease the operation of an installation (in whole or in part) The LA should be informed in writing, such notification must include the information specified in Regulation 24 or Regulation 25 and Part 1 of Schedule 5 of the EP Regulations.

Transfer of the Permit or part of the Permit

Before the Permit can be wholly or partially transferred to another person, an Application to transfer the Permit has to be made jointly by the existing and proposed holders. A transfer will be allowed unless the LA considers that the proposed holder will not be the person who will have control over the operation of the installation or will not comply with the conditions of the transferred Permit.

Talking to us

Please quote the Permit Number if you contact Charnwood Borough Council about this Permit. To give a Notification under Condition 5 the Operator should use the telephone number 01509 634636 or any other number notified in writing to the Operator by Charnwood Borough Council for that purpose.

Status Log

<u>Detail</u>	<u>Date</u>	<u>Comment</u>
Permit determined	25 January 2007	
Variation Notice	23 February 2009	Consolidated permit issued

Description of Permitted Process

The operation of a Rubble Master RM60 Impact Crusher, Serial no. NURMIAB99 for crushing, grinding and other size reduction of bricks, concrete or other mineral products at the licensed recycling plant operated by N H Skips Ltd at the site location indicated in Appendix I.

Plant Operation

PERMIT 127

The crushing plant is used in conjunction with excavators, front-end loaders and dump trucks that feed material to the crushing unit and move pre and post-processed materials.

Screening

Bricks and hard-core are screened and go through a picking station to remove any other wastes or rubbish prior to entering the crusher. The crusher unit is fed either by loading shovel or by conveyor.

Crusher Unit

The crushing unit consists of a feed hopper incorporating a vibrating feeder. The twin contra-rotating vibrating motors impart a linear movement to the feeder, causing the material loaded into the hopper to move towards the jaw crusher.

The jaw crusher consists of two jaws, one stationary and the other moving by reciprocating to a set distance with respect to the stationary jaw. Material entering the jaws is crushed by the action of the moving jaw until it is of a size which is smaller than the set distance. The crushed material falls onto a conveyor belt which delivers material forward of the machine. The section of the conveyor belt beneath the jaws is enclosed on three sides. Crushed material is carried to the end of the conveyor and falls by gravity onto the stockpile.

Principle Emissions

The principle emissions that warrant control are those consisting of particulate matter.

The following parts of the process may give rise to particulate matter in the form of dust:

- Crushing and grinding
- Screening
- Loading and unloading
- On-site transfer of dusty materials.
- Stockpiles
- Roadways, including haulage roads.

End of Introductory Note.

PERMIT 127

The above named company is permitted to operate the crushing activity detailed above subject to compliance with the following conditions:

Permit Conditions

Emission Limits and Monitoring

1. There shall be no abnormal visible dust emissions from the process or fallout of dust beyond the site boundary.
2. A visual assessment of the dust emissions from the crusher, ancillary plant, stockpiles and storage area for crushed materials shall be made on start up and on at least two more occasions each day, to assess compliance with condition 1. Where visible emissions of dust from any source are observed, the process shall cease until the cause has been investigated and the problem rectified.
3. The results of all assessments shall be recorded in a log book. The record shall be clearly legible and include the time and date, the result, the name of the person undertaking the inspection or assessment. In the case of non-compliant inspection results or emissions being assessed, the cause, the remedial action taken and the time the compliant operation is restored shall also be recorded.

The log book shall be available for inspection at the site occupied by the process by any authorised officer of Charnwood Borough Council.

4. All records of inspection shall be held for a minimum of two years at the company's principal place of business and shall be kept available for examination by an authorised officer of Charnwood Borough Council. Any historical records kept off-site shall be made available for inspection with one working week of any request by any authorised officer of Charnwood Borough Council.
5. Any malfunction or breakdown leading to abnormal emissions shall be dealt with promptly, and the process operation adjusted until normal operations can be restored. All such malfunctions shall be recorded in the log book required under condition 3 and Charnwood Borough Council informed without delay if the local community is likely to be affected.

PERMIT 127

6. If in the opinion of an authorised officer of Charnwood Borough Council there is evidence of airborne dust being deposited outside the process boundary, corrective action shall be taken without delay. If the source of the emission is uncertain the operator shall undertake an inspection and/or monitoring to identify the source. The monitoring shall be by a British Standard method or by a method agreed between the operator and Charnwood Borough Council.

Process ControlsStockpiles

7. Stockpiles of raw materials and products shall be held in such a way as to minimise the emission of wind-borne dust during loading to and from the stockpiles and during construction and management of stockpiles. Where such emissions occur the stockpile or stockpiles giving rise to emissions shall be “capped off”, that is the surface conditioned with water or covered. If long term “stocking areas” are provided fixed water sprays shall be installed.
8. No material shall be stored in the open except for:
- a) material that has been screened to remove material 3mm and under;
 - b) sand;
 - c) material used for road sub-bases (commonly known as “MOT material” or “type 1” or “type 2” material) that has been conditioned before deposition;
 - d) crusher run material that has been conditioned before deposition.
9. To control dust stockpiles shall be kept in storage bays. The storage height shall be lower than external walls of the bays unless suppression is provided to control emissions. Stock should not be piled forward of the bay.
10. The post-processed material stockpile being fed by the discharge conveyor shall, by careful management of material transfer and stockpiling, be maintained at a height which is as close to the end of the conveyor as possible in order to minimise the drop height. On start-up, prior to the build-up of the stockpile to this level, attention shall be paid to water conditioning to minimise emissions.
11. Storage areas where there is vehicular movement shall either have a consolidated surface which shall be kept clean and in good repair, or shall be kept wet.
-

PERMIT 127

Crusher Process

12. The Rubble Master RM60 shall be provided with water suppression facilities over the crusher entry and conveyor discharge point, which shall be used when necessary to minimise dust emissions. Where it is necessary to use water to suppress dust, a constant supply shall be available in all climatic conditions. If water supply or pressure is found to be insufficient to allow the dust suppression equipment to work effectively, then steps must be taken to supplement the supply to enable the equipment to work effectively or the process shall not be operated.

Conveyors

13. Conveyors shall be of sufficient capacity to handle maximum loads without spillage.
14. The conveyor shall be fitted with means for keeping the belt clean.
15. The upper 1m of the final discharge conveyors or stock pile discharge conveyors on crusher RM60 and the first 0.5m of the free fall of materials from the conveyors shall be fitted with a full hood and with water suppression unless the material has been screened to remove the under 3mm fraction.
16. The discharge conveyor shall be enclosed as far as possible to protect against wind whipping.

Loading/unloading

17. The loading of the dump trucks, excavators and front-end loaders shall be carried out such that the drop height of material is minimised when loading to and from the crusher and stockpiles. This loading shall also be carried out in such a manner as to minimise wind entrainment of dust.
18. The loading of road vehicles shall be carried out such that the drop height of crushed material is minimised and in such a general manner as to minimise the generation of airborne dust. Where emissions are seen to occur, the crushed material shall be suitably wetted prior to loading. As soon as possible after loading the vehicle shall be sheeted or otherwise totally enclosed. This shall not apply to the loading of crushed material which is greater than 75mm.
-

PERMIT 127

Transportation

19. Processed materials likely to generate dust shall be conditioned with water prior to internal transfer.
20. Roadways in normal use and any other area where there is regular movement of vehicles shall have a consolidated surface capable of being cleaned. They shall be kept clean in order to prevent or minimise dust emissions. They shall also be kept in good repair.

Management

21. The crusher unit shall be operated and maintained in accordance with the manufacturer's instructions to ensure effective control of emissions. Spares and consumables, particularly for those items subject to continual wear shall be held on site, or shall be available at short notice from guaranteed local suppliers or the original equipment manufacturer, so that plant breakdowns or malfunctions which may lead to abnormal emissions can be rectified rapidly.

Training

22. All persons operating the crusher shall be made aware of the conditions of this Permit and receive training and instruction in relation to their duties to control the process and emissions to air. Particular emphasis should be given to training for start-up, shut-down and abnormal conditions.
23. The operator shall maintain a statement of training requirements for each operational post and keep a record of the training received by each person whose actions may have an impact on the environment. These records shall be retained and made available for examination by officers of Charnwood Borough Council.

Maintenance

24. The operator shall prepare and produce a written maintenance schedule with respect to pollution control equipment. A copy of this schedule shall be provided to Charnwood Borough Council.
 25. A record of such maintenance shall be made available for inspection.
-

PERMIT 127

Standard Conditions

26. If the operator proposes to make a change in operation of the mobile plant he shall, at least 14 days before making the change, notify Charnwood Borough Council in writing. The notification must contain a description of the proposed change in operation. It is not necessary to make such a notification if an application to vary this permit has been made and the application contains a description of the proposed change. In this condition 'change of operation' means a change in the nature or functioning of the mobile plant, which may have consequences for the environment.
27. The best available techniques shall be used to prevent or, where that is not practicable, reduce emissions from the mobile plant which is not regulated by any other condition of this permit

End of Conditions

Appendix I – Site Location

Explanatory Note

This note does not comprise part of Permit Reference No. 127 but contains guidance for Operators receiving a permit.

1. Anyone who is aggrieved by the conditions attached to a Permit can appeal to the Secretary of State. Appeals must be sent within 6 months from the date of the permit (normally the date on the bottom of the permit).
2. Appeals must be made in accordance with the requirements of Regulation 31 and Schedule 6 of the EP Regulations and should be addressed as follows:

The Planning Inspectorate
Environment Team, Major and Specialist Casework
Room 4/04 Kite Wing
Temple Quay House,
2 The Square,
Temple Quay,
Bristol, BS1 6PN

3. An appeal brought under Regulation 31(b)(1) in relation to the conditions in a permit will not suspend the effect of the conditions appealed against: the conditions must still be complied with.
4. There are no forms or charges for appealing. However for an appeal to be valid, appellants are legally required to provide information as detailed in paragraphs 2(1) and (2) of Schedule 6 of the EP Regulations., namely:
 - a. A statement of the grounds of appeal
 - b. A copy of any relevant permit
 - c. A copy of any relevant correspondence between the appellant and the regulator
 - d. A statement indicating whether the appellant wishes the appeal to be in the form of a hearing or dealt with by way of written representations.

At the same time, the notice of appeal and documents (I) and (IV) must be sent to the Council.

5. In determining an appeal against one or more conditions, the Regulations allow the Inspector or Secretary of State to affirm or quash conditions or to add new conditions.
